FAMILIES AND ECONOMIC SECURITY

SB 325 - Montana FAMLI Act: A Policy Design Supporting Families and Businesses

January 2025

What is Paid Family and Medical Leave Insurance?

The Montana Family and Medical Leave Insurance Act (the FAMLI Act) would pool small contributions from employees and employers to create a dedicated funding stream for workers when they need time off to care for themselves or a loved one. From these small contributions, each representing less than half of 1 percent of wages, eligible workers would receive a portion of their wages while on leave.

Several states have implemented this model, demonstrating a cost-effective approach that helps employers retain workers, boosts workers' economic security, and improves families' well-being, public health, and the overall economy.

Who is covered?

Covering as many workers as possible is essential to program success, not only to ensure workers get the benefits they need, but also to spread out the overall costs and keep the contribution levels lower.

The FAMLI Act eligibility criteria for both employers and employees matches eligibility criteria under unemployment insurance (UI).¹ In general, FAMLI Act will cover the vast majority of workers. To qualify for FAMLI benefits, the eligible employee must earn qualifying wages under UI benefits and have contributed to the FAMLI Fund.² Pursuant to federal law, FAMLI Act would not apply to wages earned under federal government employment, and tribal government employment is exempt unless the tribal government opts into the state program. The FAMLI Act also provides elective coverage for self-employed individuals. A self-employed worker could elect coverage during an open enrollment period and would pay the employer contribution amount to be eligible for coverage.

What types of leave are covered?

Under this program, a covered individual can take leave for the following events:

- to care for one's own serious health condition;
- to care for a family member's serious health condition;
- to care for a new child within the first year of birth, adoption, or foster placement; or
- to care for a family member called to active duty (for defined limited leave periods).

A serious health condition is a situation where the individual or family member requires inpatient care in a hospital or other medical care facility or ongoing treatment by a health care provider.³

How long can people take leave?

Workers would be eligible for a maximum of 12 weeks of leave benefits in a benefit year. The leave does not have to be taken all at once and can be split between more than one qualifying reason.

Who counts as family?

Family member is defined to include a spouse, child, parent, sibling, grandparent, grandchild, domestic partner, or a spouse of any of the previously mentioned, or any individual related to the eligible employee by

blood or close association that is the equivalent of an acknowledged family relationship. This definition ensures workers can care for their families, recognizing that families vary across the state. An inclusive definition of family ensures that workers who face various family circumstances are covered, including those who need time off to care for a seriously ill parent, domestic partner, or sibling.

What benefits will the program pay?

Covered individuals who apply for benefits will receive a portion of their weekly wages based on income. Wages will be calculated similarly to UI.⁴ In order to ensure the program is viable for all workers, workers with the lowest wages would receive a higher portion of their wages.

Workers who earn less than half of the state average annual wage under UI program (\$26,897 for 2024) will receive 100 percent of their wages during qualifying leave. For workers earning more than half the state average annual wage, their benefits would scale down as income increases. The FAMLI Act uses the UI laws to calculate average annual wage and the base wages for the covered individual. The maximum weekly wage would be capped at \$1,000.

How does one apply for leave?

An eligible individual will need to apply through the Montana Department of Labor and Industry (DLI) in a process similar to applying for UI. DLI may require proof of medical condition and reason for accessing benefits. Once approved, the benefit will be distributed to the qualified individual on a weekly basis. An employer may require the employee to take FAMLI benefits concurrently with a short-term disability or family leave policy under a collective bargaining agreement or employer policy.

Weekly Benefits Under FAMLI Act			
If you earn this much a year	Which is about this much a week	Your weekly benefits will be	Or, this percent of your usual pay
\$10,000	\$192	\$192	100%
\$20,000	\$385	\$384	100%
\$30,000	\$577	\$546	95%
\$40,000	\$769	\$642	83%
\$50,000	\$962	\$738	77%
\$60,000	\$1,154	\$834	72%
\$70,000	\$1,346	\$930	69%
\$85,000	\$1,635	\$1,000	61%

How is the program funded?

Contributions will be split equally between the employer and employee. DLI will set contribution rates through rules to ensure solvency of the fund, but those total contributions cannot exceed 1 percent of employee wages. The contribution rate would apply to a worker's wages up to the contribution cap set for social security income (approximately \$168,600 for 2024). DLI will set a reduced employer contribution for small employers with fewer than 15 employees.

In a comprehensive analysis by the Montana Budget & Policy Center, using similar eligibility and benefit criteria and a study of take-up rates seen in existing statewide family and medical leave insurance programs, contributions are estimated to be less than half of one percent of employees' earnings. These contributions would cover the annual benefits paid out in a benefit year, estimated to be approximately \$52 million in the first year.

Employees and Employers Would Contribute Equally Each Contribution Represents Less Than Half of 1% of Wages				
If an eligible employee earns annual wages totaling	The employee's monthly contribution would be	And the employer's monthly contribution* would be		
\$20,000	\$4.17	\$4.17		
\$30,000	\$6.25	\$6.25		
\$40,000	\$8.33	\$8.33		
\$50,000	\$10.42	\$10.42		
\$60,000	\$12.50	\$12.50		
\$70,000	\$14.58	\$14.58		
\$85,000	\$17.71	\$17.71		

Contribution rate set at 0.5% of wages, split 50/50 employer/employee. This contribution rate is based on fiscal note for HB 651 (and is consistent with MBPC's analysis).

*Employers with fewer than 10 employees will pay a reduced rate of 50% of the employer contribution level. Employers with fewer than 15 employees but greater than 9 will pay a reduced rate of 75% of the employer contribution level.

How will the elective coverage for self-employed individuals work?

Consistent with other state family leave insurance programs, the FAMLI Act provides voluntary opt-in coverage for a self-employed individual. A self-employed individual can elect coverage at the start of the program, within 60 days of becoming self-employed (as defined by DLI), or during an open enrollment period (similar to the health marketplace). A self-employed individual must elect coverage for three years. If a self-employed individual drops coverage two or more times during a two-year period, they will be ineligible to re-enroll for five years (unless an individual is no longer considered self-employed). A self-employed individual electing coverage will submit contributions equal to the employer contribution level based on the prior year's self-employed income.

How does investing in paid leave benefit working parents in Montana?

Paid leave helps parents remain financially secure while balancing home and work demands. Access to paid leave increases the likelihood that women will return to work after leave, enabling them to earn more over their lifetime and progress in their careers.¹⁰

How does investing in paid leave benefit older workers and adult caregivers?

As our population ages, caring for an aging family member is a growing responsibility. In Montana, nearly one in four Montana workers are 55 years or older, and 112,000 people are responsible for caring for an adult family member, like spouses and aging parents. Paid leave would help them remain financially secure when they care for seriously ill family members.

How does investing in paid leave benefit businesses?

Montana continues to face a tight labor market with too few skilled workers available for job openings. In April 2024, Montana had 33,000 unfilled job openings. Roughly 12 percent of Montana young adults report not participating in the workforce, as a result of caregiving responsibilities. An estimated 21,000 parents in Montana did not participate in the workforce due to caring for children, "accounting for approximately 37 percent of all prime working age adults out of the labor force." At the same time, the retirement of baby boomers is also straining Montana's labor market. In 2024, Montana will see more than 200,000 residents in retirement. Paid leave helps businesses attract and retain skilled workers and allows small businesses to compete by providing employee benefits packages. Employers with paid leave experience reduced turnover costs. In Montana, retaining one employee in a year could save an employer up to \$16,000.¹⁴ In states with paid family and medical leave programs, workers are more likely to stay in the workforce, and employers have experienced improved worker attitudes and productivity. ^{15, 16}

How does investing in paid leave benefit Montana's economy?

Paid leave helps keep workers attached to the workforce and can increase their earnings over their lifetime. In one study, new mothers who took paid family leave were 93 percent more likely to return to work, and are more likely to earn more the year after giving birth.¹⁷ Women working for low wages and using paid leave were less likely to need SNAP benefits and reported receiving an average of \$413 less in public assistance the year after a giving birth.¹⁸

¹ Mont. Code Ann. 39-51-202 through 39-51-204. Under unemployment insurance, a covered employer is defined to one of the following: (1) total payroll for current or previous calendar year exceeds \$1,000; (2) an employer that acquires a business already subject to Montana UI; (3) an employer that is subject to Federal Unemployment Tax Act (FUTA); an employer that employs agricultural workers and pay more than \$20,000 in cash for ag labor in any quarter from the previous or current year; (5) employer that employs 10 or more ag workers in 20 different weeks during the current or previous year; or (6) employ domestic or household workers and pay more than \$1,000 in a quarter of current or previous year.

² Qualifying wages is defined in Mont. Code Ann. 39-51-2105. "To qualify for benefits, an individual must have been paid total wages for employment in the base period in an amount: (1) not less than 1 ½ times the wages earned in the calendar quarter in which wages were the highest during the base period; however, the total wages in the base period must be equal to or greater than 7% of the average annual wage described in 39-51-2201; or (2) equal to or greater than 50% of the average annual wage described in 39-51-2201."

³ This definition of serious health condition is similar to federal Family Medical Leave Act. This includes: (i) continuing treatment by a health care provider that results in incapacity of more than three consecutive calendar days, such as pneumonia, surgery or broken bones; (ii) chronic conditions that require periodic visits to provider, continue over extended period, and cause episodic rather than continuing periods of incapacity, such as diabetes or epilepsy; or (iii) conditions requiring multiple treatments and recovery from treatments, such as cancer. See Code of Federal Regulations, Title 29, Section 825.115, as of Feb. 2023.

⁴ Wages is defined in MCA 39-51-201(25).
